

LIQUID STORAGE TANKS

Robust and Customizable Solutions for Industrial Liquids

LE GARREC

FLUID SYSTEMS
DESIGNER AND
MANUFACTURER

Product Description

Le Garrec storage tanks are designed for the storage and transfer of liquids in the animal nutrition industry. Built entirely from high-quality European stainless steel, with capacities up to 70 m³, they offer exceptional durability and reliability for large-scale production sites. Fully adapted for export markets, they ensure safety, traceability, and operational efficiency.

Key Advantages

Controlled Temperature

Integrated heating system keeps sensitive liquids at optimal temperature.

Safety and Traceability

Optional sensors, alarms, insulation, and cleaning systems.

Reliability and Durability

Premium stainless steel construction ensures long service life and reduced maintenance.

Customizable

Tailored configuration with pumps, technical rooms, insulation, and instrumentation.

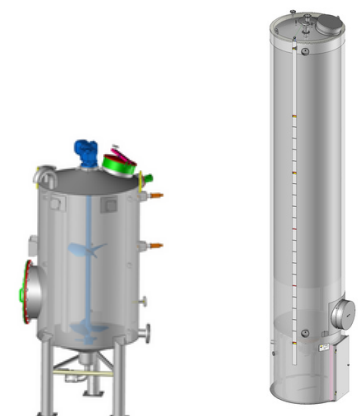

Export-ready

Suitable for transport in containers or flat racks.

Technical Highlights

- Construction: 100% stainless steel.
- Materials: European-grade, corrosion-resistant.
- Capacity: up to 70 m³.
- Bottom design: flat, sloped, conical, or domed.
- Secure access: staircase, walkway, or ladder.
- Available equipment: sensors, alarms, mixer, heating, insulation, cleaning system.

Additional components for your projects

Unloading Filter System

At Le Garrec, filtration is a strategic barrier designed to block foreign particles, protect your equipment, and ensure process purity. It has a large filtering surface and supports high-pressure cleaning for optimal maintenance.

Pump Set System

Our pump set systems are engineered to ensure smooth product transfer with precise flow control, minimizing losses and preventing overconsumption.

The Process Flow Meter

With our process flow meter setup, you benefit from accurate volume measurement — essential for dosage compliance and traceability throughout your operations.

Injection on Mixer or Coaters

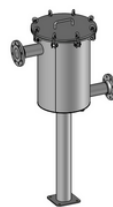

We master injection technology to guarantee perfect material homogenization and prevent agglomerate formation. Each injection point is carefully designed to ensure uniform distribution, even in the most sensitive mixtures.

Why Choose Le Garrec

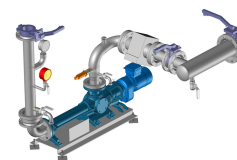

- Over 40 years of expertise in fluid process engineering.
- Turnkey solutions from design to commissioning.
- Proven international references and European quality.
- Reliable, innovative, and easy-to-integrate systems.
- Expert support at every project stage.
